FACADE COMPOSITION DIAGRAMS

Massing

BROAD FRONT

Hipped-roof or side-gable rectangular volume with roof pitches ranging from 5 to 7 in 12. Five- and three-bay compositions are common. Full front porches and one-story side wings are often placed symmetrically on the front facade. One-story side wings often occur. Although porches are most often one-third or one-fifth the length of the main body, they may also be three-fifths or the entire length of the front facade.

NARROW FRONT

Hipped-roof or front-gable box with roof pitches ranging from 5 to 7 in 12. Five- and three-bay compositions are common. Full front porches and one-story side wings are common to this massing type.

Facade Composition

The Norfolk Classical Revival facade composition is characterized by a symmetrical and balanced placement of doors and windows. Entrance doors are typically located in the center of the composition.

Typical windows occur singly and align vertically from floor to floor.

Combinations

Complex forms and larger living spaces may be created by combining side and/or rear wings with the main body. Gabled or hipped dormers may be added to introduce light into half-story and attic spaces. The architectural character of the attached parts should match that of the main body.

Wall Section & Eave Details

The first floor of the Main Body is typically set 2 to 3 feet above the finished grade. The floor-to-ceiling height on the first floor is typically 10 feet. For two-story houses, the second-story floor-to-ceiling height is 9 feet minimum.

The Norfolk Classical Revival style is characterized by the vertical proportion of the window and door elements and well-detailed Classical eaves and cornices. The frieze below the soffit is typically small with profiled moldings and dentils.
